

## **ISA PROJECT ACTIVITY**

Gyan Ganga International School conducted an activity of ISA Project based on the topic "Potable Water". This activity included all the major concern related to the topic- The status of Potable Water in India, the different sources of water, the major issues that how the water gets contaminated, how the water is supplied from different resources to different parts of the bodies and also how it reaches to its ultimate destination, to each ones home and each individual. This activity was been made more lively with the power point presentation and a documentary that was shown to the students. The documentary covered a wide range of information related to the scarcity of water in places like Rajasthan, Maharashtra, Punjab and many more. This activity was basically conducted on this platform to create awareness among the general masses about the decreasing level of potable water and how we as an individual can contribute our share in minimizing this major problem faced by our country as well as society. This activity stirred the conscious of the students when they visualized a farmer committing suicide due to the scarcity of water. At the end of the activity many queries of the students were been solved by the co-coordinator of the activity. The activity conducted in GGIS will surely bear its fruits in three days to come.
